**BATCH BURN-OFF OVEN**

Precision engineered and designed, Batch Burn-Off Ovens from Global Finishing Solutions® (GFS) use heat cleaning technology to safely and efficiently remove baked-on paint from racks, hooks, fixtures and parts. This technology limits labor costs, minimizes environmental impact and maximizes profit potential.

**HOW IT WORKS**

Batch Burn-Off Ovens can remove limited amounts of paint, powder coating, epoxies, lacquers, urethanes and other organic or inorganic compounds from a variety of parts. The oven is heated to an air temperature of 750 degrees Fahrenheit. At this point, it ignites the baked-on paint and turns it to ash. The system is fully automatic, allowing the operator to handle other tasks or run the oven at night. The average cycle time is 2 to 6 hours.

**SAFE AND CLEAN**

The primary and secondary water suppression system, along with the monitoring of both the oven and afterburner chamber temperatures, ensures a safe controlled burn-off. Hazardous contaminants are eliminated by the oven’s afterburner at temperatures between 1400 and 1900 degrees Fahrenheit. The remaining ash can be easily shaken or brushed off or washed off with a Batch Burn-Off Wash Booth. In most areas, this ash is not considered hazardous waste. GFS ovens are approved by Air Quality Authorities throughout the U.S., Canada and overseas.

**PRECISE TEMPERATURE CONTROL**

The central heat distribution system in GFS Batch Burn-Off Ovens ensures even temperatures throughout the oven chamber, eliminating cold spots. This precise control of temperature prevents distortion of the part during the process.

**OPTIONS**

- Custom controls and sizes
- Stainless steel oven interior
- Customized cart
- Temperature indicating package chart recorded (dual pen)
- FM or IRI controls

* Rear Mount Afterburner
An excellent companion to Batch Burn-Off Ovens, Batch Burn-Off Wash Booths from Global Finishing Solutions® (GFS) are designed for secondary cleanup of burned-off racks, hooks, fixtures and parts. Overhead and corner nozzles spray water on the part, flushing the loose paint ash from the surface.

**HOW IT WORKS**

A high-volume pump draws ambient water from the side reservoir tank. Water is sprayed through nozzles located overhead and in each corner. The loose ash is flushed from the surface and travels to the filtration area where it is collected for manual removal.

**STANDARD FEATURES**

- Constructed of 10-gauge steel and heavy structural steel support
- Overhead roll-up door
- Heavy-duty structural steel cart with track extension
- Header and spray nozzle system
- Manual rinse station with wand and hose for detailing of parts
- Polypropylene roof panels for greater visibility inside of booth
- Reservoir tank
- Media filter baskets with handles for easy removal of ash
- Low-solution level switch to prevent pump cavitation

**OPTIONS**

- Auxiliary manual power washer (2 gpm at 1000 psi)
- Overhead hoist (electric, 2000 lbs)
- Turntable
- Additional roll-up door
- Customized cart
