# AUTOMOTIVE REFINISH PAINT MIX ROOMS

Ultra® Paint Mix Rooms from Global Finishing Solutions® (GFS) provide a safe, controlled environment for all of your paint mixing processes. Fresh, filtered air is pulled into the Ultra Paint Mix Room, while hazardous vapors are removed, for a contaminant-free paint mixing environment. A four-inch, integrated spill containment keeps spills contained in one area and eliminates the need for an additional curb.

GFS' Ultra XD and Ultra XS Paint Mix Rooms are available in multiple configurations and can be connected to your paint booth for direct entry, ensuring that dirt and dust particles from the shop stay out of the paint. Premium Ultra XD Paint Mix Rooms feature dual-skin, insulated panels and are designed to integrate seamlessly with Ultra XD and XP1 Paint Booths. Ultra XS Mix Rooms feature single-skin design and are the perfect companion for GFS' Ultra XS Paint Booth.

## FEATURES

- White pre-coated panels
- Dual- or single-skin construction
- Complies with OSHA and NFPA safety standards
- Four-tube, T8 LED light fixtures
- Personnel door with observation window
